SUMMARY

My primary background is developing business intelligence solutions from beginning to finish, including interviews, design, integration, analysis and testing. I have through a great personal interest for programming, development and technology, as well as experience, certifications and education both a technical depth and width. In later years I have primarily worked in the role of BI architect.

I am thorough and pay attention to detail and quality while still being efficient and getting things done on time. I am motivated and cooperative which works for both team work and solo projects.

WORK EXPERIENCE

CURRENT, FROM MAY 2011 (FT)

Advectas, *Sweden*
Senior Consultant & Data Management responsible

Working as both senior consultant within data managent/data warehousing and being responsible for growing the knowledge internally (with a total of approximately 65 consultants as members), organizing meetups and conferences. This is my umbrella employment within which I've had multiple clients.

NOV 2015 – APR 2019 (FT)

Volvo Penta, *Sweden*
Lead Architect BI in GDW Technical Platform and Concept Upgrade

Re-write of existing data warehouse architecture into a full Data Vault design, including code automation (BIML) to generate core data warehouse ETL.

MAY 2012 – NOV 2015 (PT)

Volvo Penta, *Sweden*
Lead Architect BI in Global Warranty Programme

Developing and extending a BI solution with a warranty analysis application adhering to Volvo's architecture principles. Engaging with business to analyze problems and making solutions more efficient and of high quality.

MAY 2011 – MAR 2015 (PT)

FlexLink, *Sweden*
Architect / development / advisor DW & BI

Helping FlexLink to organize their information assets by developing a new data warehouse from the ground up. Lots of very fruitful exchange of knowledge and experience, making it a very interesting and fun project with a strong in-house competence to make BI thrive.

MAY 2007 – MAY 2011 (FT)

CGI/Logica, *Sweden*
Business Intelligence consultant

Integration, migration, data warehouse design, analysis & ETL dev.

WORK EXPERIENCE — EXTENDED

Advectas, *Sweden*
Senior Consultant & Data Management responsible

Advectas is a business intelligence (BI) consultancy company based in Sweden, with additional offices in Denmark and Norway. The number of employees is approximately 230. The company was founded in Gothenburg in 2006. The company works with the most popular business intelligence platforms such as Microsoft, Cognos, QlikView, Oracle, etc.

Advectas is my current employer and I work with Volvo Penta as a consultant.

Volvo Penta, *Sweden*
Lead Architect BI

Volvo Penta is a subsideary in the Volvo Group aimed at producing diesel and gas engines for both marine and industrial uses. Volvo Penta is world known for their marine products (some 50% of the engine market).

My time with Volvo Penta started with the rollout program of a new global warranty handling system and has transitioned to me having the role of domain architect within data management. I guide and give advice on data management structure and investments.

FlexLink, *Sweden*
Architect / development / advisor DW & BI

FlexLink is a sister company of SKF (world leading ball bearing company based in Sweden) aimed at producing automated solutions for various companies around the world. Automation solutions include for example sorting machines.

My time with FlexLink started as my first client at Advectas and I helped them reorganize their analysis and reporting solutions in order to improve both accuracy and make it simpler for business users to access and use information.

CGI/Logica, *Sweden*
Business Intelligence consultant

CGI is a large consultancy company specialized in most industries and is based in Canada. When I joined the company it was actually a smaller (3000 employees), Swedish-based company which was later aqcuired by Logica (40,000 employees) and then by CGI (70,000 employees).

My time at CGI involved many clients and assignments spanning from public sector (finance, judicial, medicine) to private sector (finance, sales, transportation).

Some of the most rewarding projects I worked in were at *Sahlgrenska University Hospital* where I worked as architect and developer to produce statistics and analytical tools for the hospital management. *Swedish Prosecution Agency* where I worked as architect and developer to produce accurate crime statistics.
